Hi Mary Beth, Chris, and Heather – All the test pit work has been completed and Jacobs and the test pit subcontractor have demobilized from the site as of 6:30 pm last night.

With respect to the crushed drum of what appears to be grease, we have containerized the drum in an approved DOT 55-gal drum and labeled it as “Analysis Pending” (see attached photos). The drum is at the far east end of the site. I am waiting to hear back from our Environmental Manager on what the next steps are. I think they are to have a sample collected and sent for analysis, then based on the analysis arrange for disposal.

Please let me know if you have any additional questions.

Cheers!

Bill

Subject: IMPORTANT - FW: Small Drum Excavated at Gorge Dam
Importance: High

Mary Beth, Chris and Heather – We’ve completed the test pitting work; however, during the field work today a small drum was excavated during the test pitting. Photos of drum attached. The drum was already crushed and not crushed while

we were excavating. The drum appears to be filled with black grease. As you can see from the photos, the small drum was placed on a tarp.

Heather – Is there someone from the City of Akron that could stop by the site this afternoon and take a look at the drum to determine what to do with it? For now, we will cover it with the tarp and put it off to the side.

Please let me know if you have any questions.

Cheers!

Bill
